

Components of fibrinogen 2H or 2F solutions separated by centrifugation

FIGURE 1

Chromatogram of 120 mg 2F

Not shown are fibrinogen peak (280 nm) values ranging from 1.5 to 3.2

Fraction #

Figure 2

Effect on fibroblast migration by fibrinogen isolates

Comparisons of fibrin gels from post-centrifugation isolates 2F & 2H, 2HL & 2FL(insert) with C1 (pos.) and C2 (neg.) fibrin controls, n=3.

Figure 3

Effect of Chromatographic lipoprotein fraction on fibroblast migration

C2 + lipopr : fibrinogen solution in culture media buffer contained 9 ul lipoprotein concentrate/ml before clotting

Figure 4
